CHECK VALVE

Hansen Check Valves are used in-line as a non-return valve to stop fluids from flowing back through your system. The unique design gives you exceptional flow rates, which means you can move more water in less time saving on pumping costs. The Screw Cap allows for easy access for in-line servicing, there is no Poppet Valve to wear or jam and the Diaphragm and Spring are interchangeable and replaceable with the same size Foot Valve.

FOOT VALVE

Hansen Foot Valves are used on the end of a suction line to stop fluids in the line emptying when the pump is turned off, thus eliminating the need to prime your pump at start up. The unique design gives you more flow in less time which saves on pumping costs, it has unrestricted Full Flow and has an efficiency in excess of 95% of many other types of Foot Valves. The unique product design incorporates a built in Strainer and operates at any angle or position. There is no Poppet Valve to wear or jam, it is easily serviced and the Diaphragm and Spring are interchangeable and replaceable with the same size Check Valve. Blockages are also reduced due to Low Fluid Velocity through the Slots.

2 LIFE WIRE BENEFITS

- Galfan (alloy of zinc and aluminium) coating GUARANTEES extra life - 2 times the life of heavily galvanised wire.
- Centre-less rolls, full length of the roll usable (no snags when unwinding)
- Deep crimp to aid elasticity when pulling tightly during erection, contraction & expansion during extreme weather conditions and stability when stock exert pressure.
- Gripple factory fitted on HT rolls.
- Special winding avoids 'baggy' rolls.
